

# Where **Technology** meets **Business Objectives**

## Consulting Services

Abtech realizes that every organization is unique and has its own diverse technical challenges and business goals. Our professional consultants are experts in their field and can assist organizations of any size in all project phases: design, implementation, best practices, reengineering of processes, performance analyses, or remote systems administration. Abtech's engineers are highly trained on HP-UX, AIX, OS/400, Solaris, MPE, Windows, Linux and their associated hardware. They leverage their many years of experience and knowledge from past technology rollouts to make your project successful.

By engaging Abtech's consulting services, you can increase uptime and keep your systems running at peak performance. We specialize in developing options to enhance your business productivity and reduce the overall operational costs of your data center. From remote system administration to custom software installations, no project is too large or too small.

## We can provide you with expert consulting on all your technical needs:
